Document Type:	Grants Notice
Opportunity Number:	HHS-2022-IHS-ETHIC-0001
Opportunity Title:	Ending the HIV/HCV Epidemics in Indian Country
Opportunity Category:	Discretionary
Opportunity Category Explanation:	
Funding Instrument Type:	Cooperative Agreement
Category of Funding Activity:	Health
Category Explanation:	
Expected Number of Awards:	14
CFDA Number(s):	93.933 -- Demonstration Projects for Indian Health
Cost Sharing or Matching Requirement:	No

Version:	Forecast 1
Forecasted Date:	May 26, 2021
Last Updated Date:	May 26, 2021
Estimated Post Date:	Oct 01, 2021
Estimated Application Due Date:	Jan 03, 2022
Estimated Award Date:	
Estimated Project Start Date:	
Fiscal Year:	2022
Archive Date:	
Estimated Total Program Funding:	\$2,400,000
Award Ceiling:	\$250,000
Award Floor:	\$75,000

ELIGIBILITY

Eligible Applicants:	Native American tribal organizations (other than Federally recognized tribal governments) Native American tribal governments (Federally recognized)
Additional Information on Eligibility:	

ADDITIONAL INFORMATION

Agency Name: Indian Health Service

Description:

The purpose of this program is to support communities in reducing new human human immunodeficiency virus (HIV) infections and relevant co-morbidities, specifically sexually transmitted infections (STI) and hepatitis C virus (HCV) infections, improve HIV-, STI- and HCV-related health outcomes, and to reduce HIV-, STI- and HCV-related health disparities among American Indian / Alaska Native (AI/AN) people. This notice announces the opportunity to apply for funding for the Ending the HIV/HCV Epidemics in Indian Country (ETHIC) program for AI/AN Tribes and Urban Indian Communities as administered by IHS. In two separate but related parts, this initiative aims to implement effective and innovative strategies, interventions, approaches, and services to reduce new HIV and HCV infections among AI/AN in the U.S. This initiative's overarching goals are to: (1) reduce new HIV infections in the U.S. to less than 3,000 per year by 2030; and (2) achieve a 90% reduction in new HCV infections and a 65% reduction in mortality, compared to a 2015 baseline.
